① Remote control (RC-1109).....	1
② R03/AAA batteries	2
③ Power cord (Cord length: Approx. 1.6 m)	1
④ AM loop antenna	1

Cautions on Handling

• Before turning the power switch on

Check once again that all connections are correct and that there are no problems with the connection cables.

- Power is supplied to some of the circuitry even when the unit is set to the standby mode. When traveling or leaving home for long periods of time, be sure to unplug the power cord from the power outlet.

• Sufficiently ventilate the place of installation

If the unit is left in a room full of the smoke from cigarettes, etc., for long periods of time, the surface of the optical pickup could get dirty, in which case it will not be able to read the signals properly.

• About condensation

If there is a major difference in temperature between the inside of the unit and the surroundings, condensation (dew) may form on the operating parts inside the unit, causing the unit not to operate properly.

If this happens, let the unit sit for an hour or two with the power turned off and wait until there is little difference in temperature before using the unit.

• Cautions on using mobile phones

Using a mobile phone near this unit may result in noise. If so, move the mobile phone away from this unit when it is in use.

• Moving the unit

Turn off the power and unplug the power cord from the power outlet.

Next, disconnect the connection cables to other system units before moving the unit.

- Note that the illustrations in these instructions may differ from the actual unit for explanation purposes.

Cautions on Installation

Note:

For proper heat dispersal, do not install this unit in a confined space, such as a bookcase or similar enclosure.

The signals on the CD layer can be played on a regular CD player.

Types of Super Audio CDs

- ※ What is the HD layer?
The HD layer is a layer of high density signals for Super Audio CDs.
- ※ What is the CD layer?
The CD layer is the layer of signals that can be read on a regular CD player.

This unit is not compatible with multi-channel playback.

2 Music CDs

Connections

Connections for all compatible audio signal format is described in this operating instructions. Please select the types of connections suited for the equipment you are connecting.
With some types of connections, certain settings must be made on the RCD-CX1. For details, refer to the instructions for the respective connection items below.

NOTE

- Do not plug in the power cord until all connections have been completed.
- When making connections, also refer to the operating instructions of the other components.
- Be sure to connect the left and right channels properly (left with left, right with right).
- Do not bundle power cords together with connection cables. Doing so can result in humming or noise.

Preparations

Cables Used for Connections

Select the cables according to the equipment being connected.

Audio cables

Optical digital connections

Optical cable

Analog connections (stereo)

Stereo pin-plug cable

Speaker connections

Speaker cables

Signal direction

Audio signal:

Using the AM Loop Antenna

- ☐ To use suspended on a wall
Suspend directly on the wall without assembling.

- ☐ To use standing alone
Use the procedure below to assemble.

Assembling the AM Loop Antenna

- 1 Bend in the direction of the arrow.

- 2 Insert into the hole.

Speaker Connections

Connecting the Speaker Cables

Carefully check the left (L) and right (R) channels and + (red) and – (black) polarities on the speakers being connected to the RCD-CX1, and be sure to interconnect the channels and polarities correctly.

1 Peel off about 10 mm of sheathing from the tip of the speaker cable, then either twist the core wire tightly or terminate it.

2 Turn the speaker terminal counterclockwise to loosen it.

3 Insert the speaker cable's core wire to the hilt into the speaker terminal.

4 Turn the speaker terminal clockwise to tighten it.

NOTE

- Use speakers with an impedance of 4 to 16 Ω/ohms. The protection circuit may be activated if speakers with an impedance other than specified are used.
- Connect the speaker cables in such a way that they do not stick out of the speaker terminals. The protection circuit may be activated if the core wires touch the rear panel or if the + and – sides touch each other (see "Protection circuit").
- Never touch the speaker terminals while the power supply is connected. Doing so could result in electric shock.

Protection circuit

The protection circuit will be activated in the following cases:

- When the speaker cable's core wires are touching the rear panel or screws or when the speaker cable's + and – sides are touching
- When the surrounding temperature is extremely high
- When the internal temperature rises due to extended use with a high output

If this happens, unplug the power cord, then check the connections of the speaker cables and input cables. If the set's temperature is extremely high, wait for it to cool off and improve surrounding ventilation. After doing this, plug the power cord back in.

If the protection circuit is activated though there are no problems in ventilation around the set or in connections, the set could be damaged. Turn off the power, then contact a DENON servicing and inquiry outlet.

Connecting the Playback Components

Record Player

- With some record players, noise may be generated when the ground wire is connected. If so, disconnect the ground wire.
- Set the CARTRIDGE selection switch to “**MM**” or “**MC**” according to the cartridge being used.

NOTE

The RCD-CX1's SIGNAL GND terminal is meant to reduce noise when a record player is connected. This is not a safety ground terminal.

iPod®

Use a DENON control dock for iPod (ASD-1R or ASD-3N/3W, sold separately) to connect the iPod to the RCD-CX1.

- When using a control dock for iPod, the Control Dock for iPod must be set. For details, refer to the operating instructions of the Control Dock for iPod.
- When the control dock for iPod is connected, the function indicator switches from “LINE1” to “iPod”.
- To use an iPod, see “iPod® Playback” (page 22).

Connecting a Power Amp and Subwoofer

Use when adding a power amp, subwoofer, etc.

NOTE

DO NOT insert a short pin plug for recording output (REC) and pre-out terminals, as this may result in damage.

Connecting the Recording Components

CD Recorder / MD Recorder / Tape Deck

Analog connections

Digital connections

No digital signals are output for Super Audio CDs.

- When connecting the optical digital output connector with an optical transmission cable (sold separately)

Remove the protective cap, match the shapes, then insert firmly all the way in.

Store the protective cap in a safe place so as not to lose it, and use it when not using the terminal.

Connections to Other Devices

Antenna terminals

AM / FM

The AM and FM reception sensitivity depends on the place the antenna is set and the direction in which it is set. Set it so that reception is best.

Connecting the AM loop antenna

1 Push the lever.

2 Insert the conductor.

3 Return the lever.

NOTE

- Make sure the AM loop antenna lead terminals do not touch metal parts of the panel.
- Do not connect two FM antennas simultaneously.

Connecting the Power Cord

Wait until all connections have been completed before connecting the power cord.

NOTE

- Insert the AC plugs securely. Incomplete connections could cause noise.
- When the power cord is plugged into the power outlet, the power indicator flashes orange for about 10 seconds. Do not unplug the power cord before the power indicator turns off and the RCD-CX1 enters Standby mode.
- Only use the supplied power cord.
- Be sure the power cord is unplugged from the power outlet before connecting or disconnecting it to the AC IN.
